# Data Collection Report

Five cohort directories processed: temp, lucide, rossy, precious, and jerry.
Actual participants represented after cohort namespacing: 50 users.
Provided demographic forms available for 20 users.
Generated demographic placeholders required for 30 users.
Rossy was rebuilt from its 10 raw participant files because the old unified workbook omitted one user.
Because generic anonymized IDs were reused across different groups, participant IDs were prefixed by cohort to avoid false merges.
