Cleaning Report

Main cleaning issues: repeated banner rows, mixed FCFA/XAF labels, missing new balances, and reused anonymized user IDs across cohorts.
Main cleaning actions: normalized currencies, numeric/date parsing, cohort namespacing, filtered the jerry workbook to valid transaction rows, and rebuilt rossy from raw per-user files.
Cleaned transaction rows: 13,426.
Unique users after full 5-cohort merge: 50.
Feature engineering includes hour, weekend flags, monthly counts/volumes, total IN/OUT behavior, and send/receive ratio.
